

Anti-Aging SB 500 ampoule course

Anti-aging intensive complex with retinol,
coenzyme Q10, vitamin C and E

The highly concentrated ampoule course is at the heart of the anti-aging series. The combination of retinol, coenzyme Q10, vitamin C and E complement each other perfectly in the anti-aging effect.

Retinol (vitamin A) is known as one of the most effective anti-wrinkle substances in cosmetics. The body usually produces vitamin A itself. However, it is taken from the skin due to aging and by UV rays. The top layer of skin becomes thinner and can store less moisture. The connective tissue fibres lose elasticity. The skin becomes dry and flaky and wrinkles develop. Retinol encourages cell regeneration, reduces wrinkles and pigment marks, improves the supply of moisture and protects against free radicals. The skin is protected from premature roughness. It becomes smoother and more taut and wrinkles are reduced.

Coenzyme Q10 is indispensable for the body's own production in the cells. Furthermore, it is an excellent antioxidant that protects against free radicals and therefore contributes towards damages in the cells not developing in the first place or, if they already exist, towards damaged cells being able to increase their lower performance levels. The concentration of the coenzyme Q10 reduces in the cells with progressing age or as a result of stress. The skin consequently loses energy, cell reproduction slows down and the first signs of aging such as lines and wrinkles appear. Coenzyme Q10 activates the production systems in the cells and therefore cell regeneration.

Vitamin C is particularly important for the skin because it vigorously boosts the body's own production of collagen, elastin and hyaluronic acid.

Vitamin E, as a multi-functional substance, leads to smoothing and improvement of the skin contours and is particularly recommended for aging skin.

The composition of **pentavitin** corresponds with the skin's natural moisturising factors and allows intensive supply of moisture to the upper skin layers. As it forms a direct connection with the corneal layer, it is not washed off and therefore saturates the skin. This means a long-lasting effect is achieved.

This course of ampoules gives you a fresh and healthy appearance. The skin structure is improved and fine lines reduced. Protection against radicals is clearly increased and the skin protected against the consequences of skin aging caused by sunlight. Long-lasting moisture is also provided.

Application: Use the anti-aging SB 500 ampoule course once per day, preferably in the evening. After cleansing thoroughly, evenly apply the anti-aging intensive complex to problem areas particularly susceptible to wrinkles such as the face, neck and décolletage and massage in.

The innovative shape of the pipette ampoules gives the guarantee that the high quality ingredients contained are protected, but can still be simply and accurately dosed. One ampoule is enough for several applications and has very good coverage.

Ingredients: Aqua, Pentylene Glycol, Simmondsia Chinensis Seed Oil, Caprylic/Capric Triglyceride, Prunus Amygdalus Dulcis Oil, Cetearth-12, Tocopheryl Acetate, Saccharide Isomerate, Cetearyl Alcohol, Cetearth-20, Ubiquinone, Retinol, Sodium Ascorbyl Phosphate, Sodium Cetearyl Sulfate, Lecithin, Glycine Soja Oil, Citric Acid, Alcohol, Sodium Citrate, Polysorbate 20, Potassium Phosphate, Xanthan Gum.

Made in Germany

Contents 7 x 4 ml
